Descripción

Mach4-Hobby

You will be Buying one License for the Parallel Port Legacy Plugin for Mach4. This plugin allows the use of the parallel port as a motion control device on supported computer systems with Mach4.

IMPORTANT NOTE: The LICENSE will only work for the Computer for which you supply the PC ID at checkout. Each PC has a unique ID code and the license works in coordination with this code. The PC ID for this plugin will be the same as the PC ID for Mach4

[Pantallas](#)

The parallel port is obsolete on most new computers. We do not recommend using the parallel port with Mach4 as performance is reduced by both this data connection and the processing and memory power of older computers. This plugin is mainly for users who wish to upgrade from Mach3 to Mach4 and continue to use the parallel port as they have done in the past. Please review the recommended system requirements before purchasing. Art Fenerty helped write this code and he will be thanked directly by your purchase of the legacy plugin for his work and commitment.
